

Heatmap showing the expression of the top 10 differentially expressed genes across five conditions: Uninfected, BLV, ME, ME, and ME. The genes are listed on the left: IL1B, IL6, IL1A, IL1RN, IL1RN, IL1RN, IL1RN, IL1RN, IL1RN, and IL1RN. The heatmap shows varying levels of expression, with red indicating higher expression and blue indicating lower expression. A dendrogram on the left shows the clustering of the genes.
