

Heatmap showing the correlation of gene expression between two groups of samples. The dendrogram on the left shows hierarchical clustering. The heatmap on the right shows the correlation matrix. The color scale ranges from -0.5 (blue) to 0.5 (red). The samples are labeled 0123456789A01234567890. The correlation values are high (red) for samples within the same group and lower (blue) for samples between groups.
